

Steps to create java project in eclipse

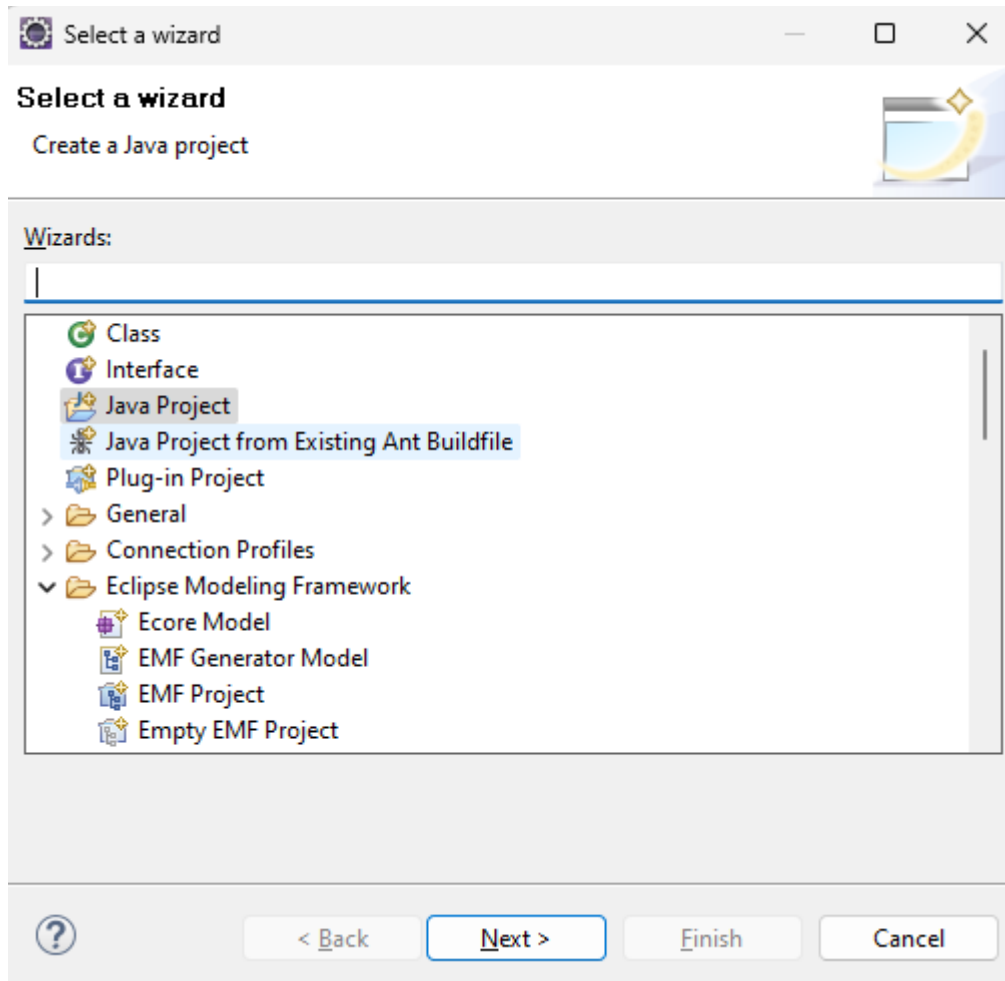

Step no 1: Open eclipse

Press Launch Button

Step 2: on left most corner click **File->New->Other**

On Wizards search **Java Project** and click **Next** button

New Java Project

Create a Java Project

Enter a project name.

Project name:

☒ Use default location

Location:

JRE

☒ Use an execution environment JRE:

☐ Use a project specific JRE:

☐ Use default JRE 'jre' and workspace compiler preferences [Configure JREs...](#)

Project layout

☐ Use project folder as root for sources and class files

☒ Create separate folders for sources and class files [Configure default...](#)

Working sets

☐ Add project to working sets

Working sets:

Module

☐ Create module-info.java file

On Project name column write any name for your project (follow naming convention of java identifier)

Example I write project name – Parul

Note: **Uncheck Create module-info.java file**

Click Next button

New Java Project

Create a Java Project

Create a Java project in the workspace or in an external location.

Project name:

☒ Use default location

Location: [Browse...](#)

JRE

☒ Use an execution environment JRE:

☐ Use a project specific JRE:

☐ Use default JRE 'jre' and workspace compiler preferences [Configure JREs...](#)

Project layout

☐ Use project folder as root for sources and class files

☒ Create separate folders for sources and class files [Configure default...](#)

Working sets

☐ Add project to working sets [New...](#)

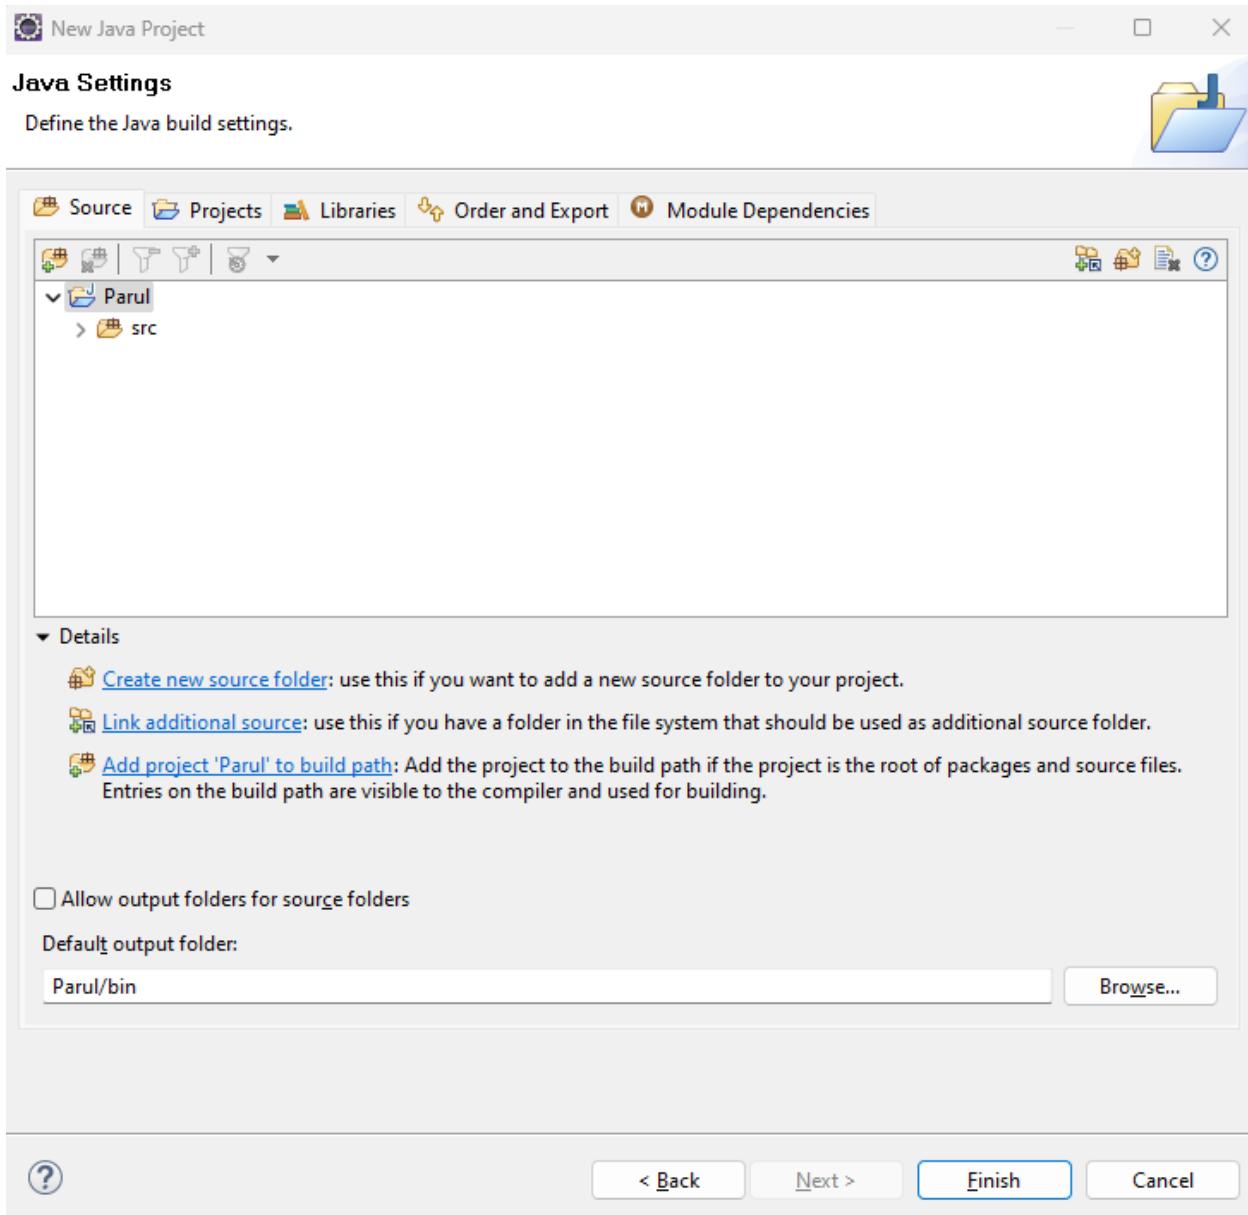

Working sets: [Select...](#)

Module

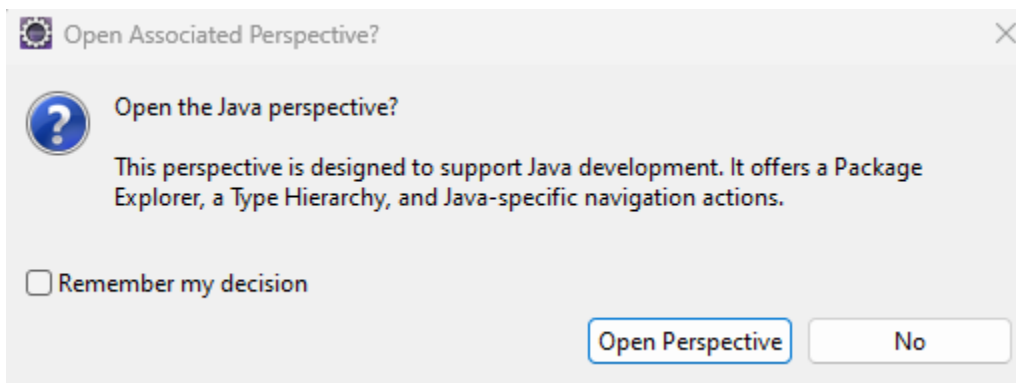

☐ Create module-info.java file

[?](#) [< Back](#) [Next >](#) [Finish](#) [Cancel](#)

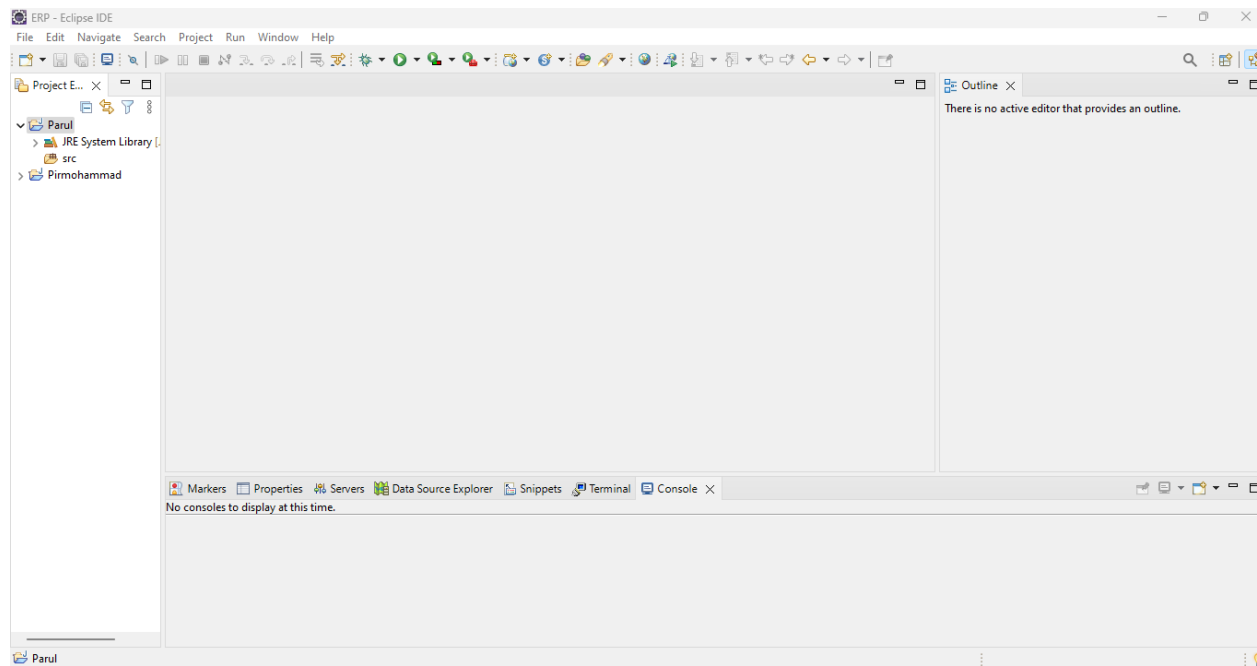

After click finish

If popup box open then click No

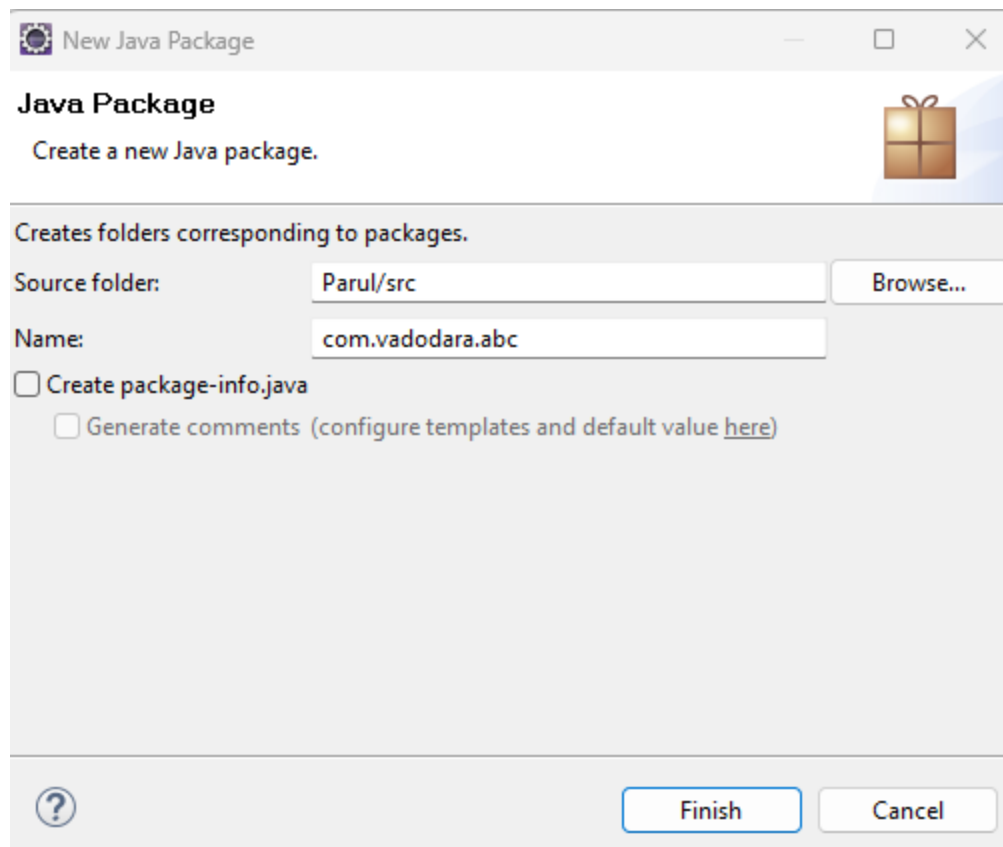

Now Project – Parul is created click arrow and find two folders

Right click on src folder

Go to new -> package -> package name

Note : package name will be com.vadodara.abc

Click finish button

Now right click on package

Go to new->class->class name

Note: class name in my program is Test

New Java Class

Java Class

Create a new Java class.

Source folder:

Package:

☐ Enclosing type:

Name:

Modifiers: ☒ public ☐ package ☐ private ☐ protected
☐ abstract ☐ final ☐ static
☒ none ☐ sealed ☐ non-sealed ☐ final

Superclass:

Interfaces:

Which method stubs would you like to create?

☐ public static void main(String[] args)
☐ Constructors from superclass
☒ Inherited abstract methods

Do you want to add comments? (Configure templates and default value [here](#))

☐ Generate comments

Click finish

```
Test.java ×
1 package com.vadodara.abc;
2
3 public class Test {
4
5 }
6
```

You get this code

Now write java code

```
Test.java ×
1 package com.vadodara.abc;
2
3 import java.sql.Connection;
4 import java.sql.DriverManager;
5 import java.sql.SQLException;
6 import java.sql.Statement;
7
8 public class Test {
9     public static void main(String[] args) throws ClassNotFoundException, SQLException {
10         System.out.println("Start writing JDBC Code");
11         // Loading Database Driver
12         Class.forName("com.mysql.cj.jdbc.Driver");
13         //Create connection
14         Connection conn = DriverManager.getConnection("jdbc:mysql://localhost:3306/parul", "root", "root");
15         Statement st = conn.createStatement();
16         int rows = st.executeUpdate("insert into movies values(4,'Hera Pheri','Sunil Shetty','Tabbu')");
17         System.out.println(rows + "rows inserted succesfully");
18     }
19 }
20
21
```

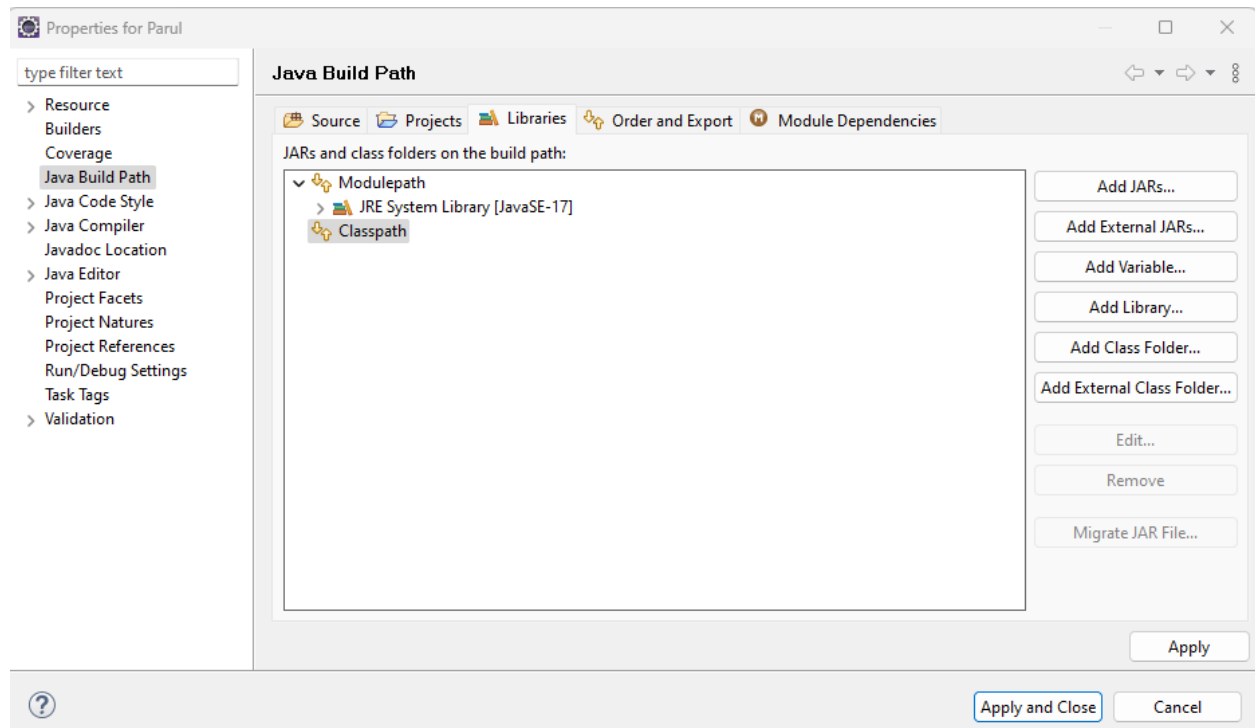

If you run that program you will get exception

```
Start writing JDBC Code
Exception in thread "main" java.lang.ClassNotFoundException: com.mysql.cj.jdbc.Driver
    at java.base/jdk.internal.loader.BuiltinClassLoader.loadClass(BuiltinClassLoader.java:641)
    at java.base/jdk.internal.loader.ClassLoaders$AppClassLoader.loadClass(ClassLoaders.java:188)
    at java.base/java.lang.ClassLoader.loadClass(ClassLoader.java:520)
    at java.base/java.lang.Class.forName0(Native Method)
    at java.base/java.lang.Class.forName(Class.java:375)
    at com.vadodara.abc.Test.main(Test.java:12)
```

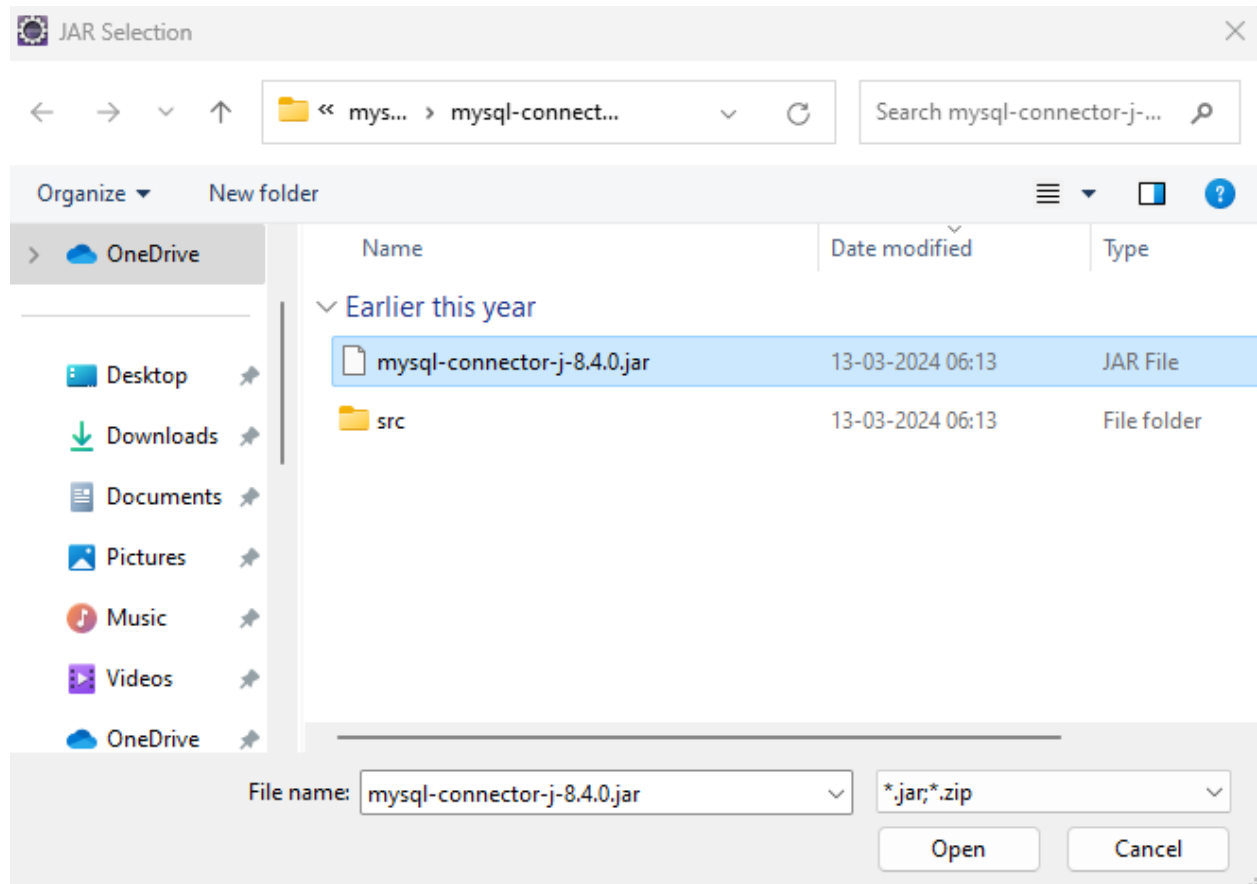

So you need to add jar file of Mysql connector

For adding Mysql connector jar file

**Right click on Parul (Project name) -> Build Path -> configure Build Path -> Libraries
Tab->class path -> add external jar files ->**

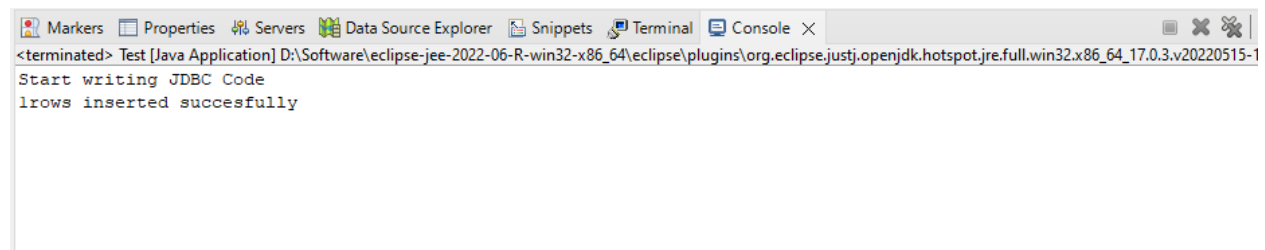

Open jar file

Then click apply and close

Now again run java program and exception/error resolve

Now see on our database table new record will be inserted

```
mysql> select * from movies;
```

mno	mname	hero	heroine
1	bahubali	prabhas	Tamannah
2	rayees	shahrukh	deepika

```
2 rows in set (0.00 sec)
```

```
mysql> select * from movies;
```

mno	mname	hero	heroine
1	bahubali	prabhas	Tamannah
2	rayees	shahrukh	deepika
4	Hera Pheri	Sunil Shetty	Tabbu

```
3 rows in set (0.00 sec)
```

```
mysql>
```
